

SAFETY DATA SHEET

Date Printed: 05/11/2024 Date Revised: 01/15/2022

SECTION 1. IDENTIFICATION

Product Identifier: (4N) 99.99% Aluminum Phosphide

Product Code: AL-P-04

CAS Number: 20859-73-8

Relevant identified uses of the substance: Scientific research and development

Supplier details:

American Elements 10884 Weyburn Ave. Los Angeles, CA 90024 Tel: +1 310-208-0551 Fax: +1 310-208-0351 Emergency telephone number: +1 800-424-9300

SECTION 2. HAZARDS IDENTIFICATION

Emergency Overview Aluminum phosphide - reacts with water to produce phosphine gas (PH3) Dangerous when wet Fatal if swallowed or inhaled When sealed aluminum foil pouches are opened contact with the moisture in the air will cause phosphine gas to be released Phosphine is spontaneously flammable in air.

DANGER!

Appearance Greenish, Yellow. Physical State Solid. Odor Garlic like. Pure phosphine gas is odorless but a garlic odor might be detected due to a contaminant. Since odor may not be detected under certain circumstances, the absence of a garlic odor does not mean that phosphine gas is absent Potential Health Effects

- Inhalation
- Ingestion
- Skin contact

Acute Effects

Phosphine gas is odorless. Accidental ingestion of aluminum phosphide or inhalation of phosphine gas have been reported to produce CNS depression, pulmonary edema, respiratory distress syndrome, cardiac dysrhythmias, seizures, liver injury and renal failure. Eyes: Irritating to eyes. Skin: Irritating to skin Inhalation: Fatal if inhaled - Do not breathe mist/vapors. Ingestion: Fatal if swallowed - Do not eat, drink, or smoke while handling this product.

SECTION 3. COMPOSITION/INFORMATION ON INGREDIENTS

Chemical Name Aluminum phosphide CAS-No 20859-73-8 Weight % 77.5 OSHA PEL N/A

SECTION 4. FIRST AID MEASURES

Skin Contact Brush or shake off material. Wash contaminated skin with soapy water in a well ventilated area

Call poison control center or doctor for treatment advice.

Eye Contact

Hold eye open and rinse slowly and gently with water for 15 - 20 minutes.

Remove contact lenses, if present, after 5 minutes, then continue rinsing eye.

Inhalation If breathing is irregular or stopped, administer artificial respiration

May cause allergic respiratory reaction

Call a physician or poison control center immediately

SECTION 5. FIREFIGHTING MEASURES

Aluminum phosphide - is not flammable. However, it reacts readily with water to produce hydrogen phosphide (phosphine, PH3) gas which may ignite spontaneously in air concentrations above the LEL of 1.8% v/v.

Extnguishing Media Carbon dioxide (CO2) Dry powder Dry chemical Sand Autoignition Temperature Not available

Fire/Explosion Hazard Alphos = Hydrogen phosphide (Phosphine)/air mixtures at concentrations above the lower flammable limit may ignite spontaneously. Ignition of high concentrations of hydrogen phosphide can produce a very energetic reaction. Explosions can occur under these conditions and may cause personal injury.

Never allow the build- up of hydrogen phosphide to exceed explosive concentrations. Containers of metal phosphides should be opened in open air and never in a flammable atmosphere. Do not confine spent or partially spent dust from metal phosphide fumigants as slow release of the hydrogen phosphide from these materials may reusit in formation of an explosive atmosphere. Spontaneous

ignition may occur if large quantities of aluminum phosphide are piled in contact with liquid water. Fires containing hydrogen phosphide or metal phosphides will produce phosphoric acid by the following reaction: 2PH3 +4O2 = H2O + P2O5 = 2H3PO4

SECTION 6. ACCIDENTAL RELEASE MEASURES

Personal Precautions

Remove all sources of ignition. Ensure adequate ventilation. Avoid contact with skin, eyes and clothing. Use personal protective equipment. An accidental spill/release of material may produce high levels of gas. A NIOSH/MSHA approved full face gas mask with phosphine cartridge of SCBA must be employed during wet deactivation of partially spent material. Wear protective gloves and clothing.

Environmental Precautions

Do not flush into surface water or sanitary sewer system. Should not be released into the environment. Methods for Clean-up

Do not use water at any time during clean-up. Wear gloves when handling aluminum phsophide. Damaged aluminum foil pouches should be transferred to a sound dry metal cotainer and immediately seal and properly label as aluminum phosphide. Follow all label instructions for disposal of residual material and/or empty containers.

SECTION 7. HANDLING AND STORAGE

Handling

Use of this product is STRICTLY PROHIBITED on single and multifamily residential properties and nursing homes, schools (except athletic fields) daycare facilities and hospitals. Keep out of reach of children. Do not eat, drink or smoke when using this product. Remove all sources of ignition. Wear personal protective equipment. It is recommended that aluminum foil pouch be opened in air or near a fan, which exhausts outside immediately. Never open in a flammable atmosphere as the product may, although rare, flash. When opening, point pouch away from the face and body. These precautions will reduce the applications potential for exposure to hydrogen phosphide (phosphine) gas. Do not expose product to atmospheric moisture any longer than is necessary.

Storage

Store in cool/well-ventilated place. Keep away from heat and sources of ignition.

Do not transport or store above 38 C/100 F. Do not store in buildings where humans or domestic animals reside.

SECTION 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Exposure Guidelines

Engineering Controls

Investigate engineering techniques to reduce exposures. Local mechanical exhaust ventilation is preferred. Consult ACGIH ventilation manual or NFPA Standard 91 for design of exhaust systems. Use equipment/monitors for the detection of phosphine gas.

Personal Protective Equipment

Where there is potential for eye contact have eye flushing equipment available. Eye contact should be avoided through the use of chemical safety glasses, goggles, or a faceshield selected in regard to exposure potential.

Wear protective gloves/clothing. Respiratory Protection A NIOSH/MESA approved full face mask with approved canister for phosphine may be employed for concentrations up to 15 ppm. At concentrations above that level, or when concentration is unknown, NIOSH/MESA approved SCBA or equivalent must be worn.

SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance Greenish Yellow Odor Garlic like Pure phosphine gas is odorless but a garlic odor

might be detected due to a contaminant. Since odor may not be detected under certain circumstances, the absence of a garlic odor does not mean that phosphine gas is absent.

Physical State: Solid pH: 8.13 VOC Content: Not available

SECTION 10. STABILITY AND REACTIVITY

Stability This product is stable to most chemical reactions except for hydrolysis. A component of this product, aluminum phosphide, reacts with moisture from the air, water, acids and many other liquids to produce toxic and flammable hydrogen phosphine gas. Pure hydrogen phosphide (phosphine) gas is practically insoluble in water, fats and oils and is stable at normal fumigation temperatures.

SECTION 11. TOXICOLOGICAL INFORMATION

Component Information Aluminum phosphide -Acute oral LD50 = 11.5 mg/kg Acute dermal LD50 = >5,000 mg/kg (1 hr exposure) Sensitization = Not a sensitizer Hydrogen phosphide (phosphine) gas -Inhalation = LC50 190 ppm (1 hour) Carcinogenicity Aluminum phosphide: Chronic effects = Not expected to produce target organ effects Mutagenicity = No data Carcinogenicity = Not classified as a carcinogen by IARC, OSHA, or NTP Reproductive and Developmental Effects = Not expected to produce reproductive or developmental effects. Hydrogen phosphide (phosphine) gas -Chronic effects = In a 2-year study, rats were exposed to 48-90 g/m3 of feed and no overt systemic toxicity was noted. Mutagenicity = Increased frequency of cells with structural chromosomal aberrations noted in an invitro cytogenetic assay with Chinese hamster ovary cells. Carcinogenicity = Not classified as a carcinogen by IARC, OSHA or NTP Reproductive and developmental effects = Not expected to product reproductive or developmental effects

SECTION 12. ECOLOGICAL INFORMATION

Ecotoxicity

Highly toxic to wildlife. Non-target organisms exposed to phosphine gas in burrows will be killed.

SECTION 13. DISPOSAL CONSIDERATIONS

Waste Disposal Method

Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide or rinsate is a violation of Federal law. If the wastes cannot be disposed of by use or according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance. Follow label for proper disposal instructions.

SECTION 14. TRANSPORT INFORMATION

DOT Proper Shipping Name: Aluminum phosphide Hazard Class 4.3 Subsidiary Class: 6.1 UN-No: UN 1397 Packing Group: PGI

SECTION 15. REGULATORY INFORMATION
